

Demo site 12 - UK Nirex CARD Project

HTML clipboard

CARD - European Commission Sixth Framework Programme, Co-ordination Action for the co-ordination, research, development and demonstration, priorities and strategies for geological disposal of radioactive wastes.

We created the UK Nirex CARD Project's main website using traditional HTML technology because this is what was required in order that the site could be easily hosted on UK Nirex's own computers. It is such a simple but unique site that has limited aims but accomplishes them exactly as per the customer's requirements. It is extremely fast to load and provides the essential information within with the minimum of fuss. This site shows that if you require a completely unique site that is not based upon any existing template then we can do it for you using traditional HTML techniques.

The UK Nirex CARD Project required a website in order to support a feasibility assessment of a Technology Platform that would provide a European framework for networking and co-operation in the context of R&D for radioactive waste disposal in the EU.

Click on the image below to be taken directly to UK Nirex CARD Project website.

No search engine friendly tools are in place as this site is essentially an internal site published by linking the various associated EU national sites together.
